

Added Security Option for Anlin Sliding Windows

Sash Dead Bolt for Fast and Easy Locking

Sash Dead Bolt An Even Safer Choice For Anlin Sliding Windows

AN INEXPENSIVE UPGRADE WITH A BIG PAYOFF

Having Anlin equip your sliding windows with this optional sash bolt might be the easiest decision you make all year. A very affordable upgrade, it will work in conjunction with Anlin's already-tough standard safety features to make your windows an even stronger deterrent to intruders.

Anlin Standard Feature:

Anti-lift block hidden in the head track prevents sash from being lifted out of the sill.

Anlin Standard Feature:

Tamper-proof cam lock – the primary window lock – hooks and grabs the keeper post, then pulls sash tight to center bar. *(Passed CFE test.)*

OPTIONAL Sash Bolt:

Sash bolt slides into sill track to secure window. *(Passed CFE test.)*

SECURE

This solid stainless steel 1/4" sash bolt is so strong it even passed the stringent California Forced Entry (CFE) tests when used by itself (with the standard cam lock in "unlocked" position). The sash bolt is in a metal casing and is secured with screws into the sash's aluminum-reinforced rail.

STYLISH

Anlin sash bolts are color-matched to the sash and have a sleek profile, while the contour lever allows for easy operation.

SIMPLE

Choose the sash bolt option, and your Anlin windows will arrive at your home with sash bolts already installed. To ensure proper alignment, your window installer will drill the receiver hole into the sill track after your windows are installed. All you will have to do is lock and unlock!

The Sash Bolt is available exclusively from Anlin on sliding windows in the following configurations: XO, OX and XOX.
